To Whom it May Concern:

SUBJECT: Reference for Aircon Corporation

NGM International has had the opportunity to work with Aircon Corporation on two full scale OSB mill project dust collection and pneumatic handling system supply and install contract packages. Both systems were for the same client. The first installation, we were involved both from a system process design, as well as balance of plant, while the second occasion was more specifically power and control of their system. The systems were competitively priced based on system specifications. The first selection was based on equipment design, price, presentation and reference check. The second selection was based on the success of the first installation.

We would recommend Aircon Corporation to any potential customer in the wood products industry.

Yours very truly,

NGM INTERNATIONAL

Subject: Letter of Recommendation for Aircon Corporation

To Whom It May Concern:

I have worked with Aircon Corporation over the last 20 years on several successful industrial projects. Those projects have ranged from sawmill work, particleboard plant work, and OSB plant work.

As a consulting engineer, I have learned to appreciate the level of detail design that Aircon provides as part of their service as well as the fact that the finish pneumatics systems they have provided on these projects have always successfully served the purpose for which they were designed.

Aircon has always conducted their business with integrity and honesty and has always provided the level of service and quality expected when they have been selected to work on a project.

I have worked with many of the major pneumatics system suppliers through the years, and there are several companies that I would consider as top line suppliers of these systems. In my opinion, Aircon certainly should be included in the upper tier of these suppliers.

Sincerely,

Curtis Wright
Vice President, Engineered Products

To Whom It May Concern:

The Aircon Corporation played a sizeable role in the construction of the Broken Bow OSB Plant by supplying all of the pneumatic equipment for the facility. All of their equipment was delivered on schedule and their erection crews were highly professional and flexible to work with. The facility has started up very well with no issues to speak of with any of Aircon's supply. We will certainly be considering them for our next major project and would highly recommend them to any of their potential customers.

Best regards,

Ed Milburn
Plant Manager

To Whom it may concern:

CPM Consultants Inc. has been consulting to the composite wood products industry for over 27 years. In those years I have had the pleasure of working with Aircon on a number of projects requiring the design, supply and installation of pneumatic conveying and dust aspiration systems, as well as ventilation systems.

I have found that in their dealings with both CPM and the Clients, Aircon has consistently shown a high level of professionalism, and demonstrated a refreshing degree of honesty and integrity in their business dealings.

Aircon's level of cooperation and helpfulness during the progress of the project from conception to completion, and commissioning has made working with them an enjoyable experience. In addition Aircon has displayed an impressive level of innovation, technical and design capabilities that have helped to bring our projects to a successful completion.

I would have no hesitation in recommending Aircon as a top-notch pneumatic systems and industrial ventilation designer and supplier.

Sincerely,
CPM Consultants Inc.
